 **Bettio** zanzariere filoscreene

1988

Nasce Bettio Service e produce le prime zanzariere su misura.
Bettio Service starts and manufactures the very first custom made insect screen.

1993

Viene fondata Bettio Group, specializzata nella produzione dei sistemi in Barra.
Bettio Group is established and focuses on the production of 6mtr bar systems.

1995

Bettio brevetta la Guida Antivento per una perfetta tenuta della rete.
Bettio patents the Antwind Guide for a perfect mesh grip.

2000

Viene brevettato Clic-Clak®, innovativo sistema di sgancio/aggancio automatico.
Clic-Clak® system is patented, the innovative and automatic opening/closing system.

2006

Bettio mette la sicurezza al primo posto e brevetta la sua Frizione oleodinamica.
Bettio considers the safety a very important issue and patents its own oil-pressure brake.

2008

È l'anno della rivoluzione SCENICA® la prima zanzariera laterale avvolgibile senza binario a terra, ancor oggi unica al mondo.
It is the year of SCENICA® revolution. SCENICA® is the first lateral insect screen totally free of ground rail and still today the only one in the world.

2016

Bettio riscrive la storia delle zanzariere presentando Picoscenica®, che racchiude tutta la tecnologia Scenica® in soli 25 mm di ingombro.
Bettio rewrites the story of insect screens by introducing Picoscenica® with all the features of SCENICA® but in only 25mm width.

2018

Oggi Bettio flyscreens è un Gruppo di oltre 200 dipendenti presente, con sedi proprie, in 4 paesi nel mondo e un mercato internazionale in continua crescita.
Bettio Flyscreens today, a Group with more than 200 units personnel, has branches in 4 countries around the world and is constantly increasing.

**Bettio ha cambiato il mondo delle zanzariere e, quel che più conta, ha continuato a farlo per 30 anni.
Bettio has changed the world of insect screens and, most of all, has keep on doing so for 30 years.**

Oggi Bettio offre una innovativa collezione di zanzariere ed ha esteso la propria ricerca e produzione ad oscuranti e filtranti di altissima qualità. Massima cura progettuale, eccellenza dei materiali e rigorosi processi produttivi: le zanzariere Bettio sono prodotti affidabili e duraturi. Precisione nelle consegne, un puntuale servizio di assistenza al cliente e la garanzia di 10 anni completano l'offerta di Bettio.

Today Bettio offers an innovative selection of insect screens and has extended its research and production also to top quality black out and shading systems. Utmost care of design, excellent choice of materials and strict production processes: Bettio insect screens are reliable and durable products.

Precise and on-time deliveries, a highly effective customer service and a 10 years warranty complets Bettio's offer.

PICOSCENICA®

L'innovazione tecnica unita alla praticità della famiglia Scenica®. L'ultima nata delle rivoluzionarie zanzariere del gruppo è Picoscenica® e racchiude in sé tutti gli aspetti tecnici di questa fortunata serie di prodotti, come l'assenza totale di binario inferiore e profilo di chiusura, la possibilità di blocco della rete in qualsiasi posizione desiderata e il telo sempre dritto e ben teso. Il tutto con ingombri davvero ridotti che consentono l'installazione di questa zanzariera in uno spazio di soli 25mm! Fornita di guida con sistema anti vento – uno tra i classici brevetti Bettio – per poter essere utilizzata anche in presenza di correnti d'aria e, non per ultime, velocità e semplicità di installazione e regolazione semplice e precisa completano l'offerta tecnica di questo rivoluzionario modello.

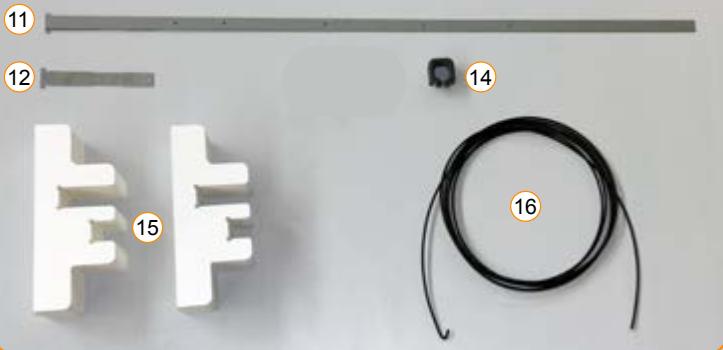

Technical innovation and the simplicity of Scenica® "family". Picoscenica® is the last born among the revolutionary screens of Scenica "family", puts together all the technical features of this pretty lucky line of screens such as absolutely no low and side rails, possibility to stop the handle bar at any desired position, mesh always smooth and plain. And all of this despite a room required for the installation of 25mm only. Picoscenica® is provided with the anti-wind brush on the rails – an historical patent by Bettio – that allows to use the insect screens also with droughts. Quick and easy installation and simple and accurate adjustments complete the technical range of this revolutionary product.

L'innovation technique associée à la commodité d'emploi propre aux moustiquaires de la famille Scenica®. Petite dernière du groupe, Picoscenica® renferme en elle tous les aspects techniques de cette série très réussie de produits comme, par exemple, l'absence totale de rail inférieur et de profil de fermeture ainsi que la possibilité de bloquer la toile, toujours droite et bien tendue, dans la position désirée. Le tout avec un encombrement véritablement réduit qui permet d'installer la moustiquaire dans un espace de 25 mm seulement! Dotée d'une brosse et de coulisse anti-vent – un des brevets classiques de la marque Bettio – de manière à pouvoir être utilisée même en présence de courants d'air, Picoscenica® offre d'autre part une grande facilité et rapidité de montage ainsi que des réglages simples et précis qui font d'elle un modèle révolutionnaire.

Technische Innovation vereint mit der Zweckmäßigkeit der Scenica®-Familie. Der Neuzugang der revolutionären Fliegengitter der Gruppe heißt Picoscenica® und besitzt alle technischen Aspekte dieser erfolgreichen Produktserie wie das vollständige Fehlen einer unteren Schiene und eines Abschlussprofils, die Möglichkeit, das Netz in jeder gewünschten Position festzustellen und eine immer gerade und gut gespannte Fliegengitterbahn. Und alles bei wirklich geringem Raumbedarf, der eine Installation dieses Fliegengitters in nur 25 mm erlaubt! Es ist ausgerüstet mit einer Bürste mit Windschutzführung – eines der klassischen Patente von Bettio –, um auch bei Luftzügen benutzt werden zu können und, last but not least, wird das technische Angebot dieses revolutionären Modells abgerundet durch eine schnelle und leichte Installation sowie eine einfache und präzise Einstellung.

INSTRUCTIONS FOR USE AND MAINTENANCE (ORIGINAL INSTRUCTIONS)

1. PURPOSE

These instructions are intended for those who use the flyscreen, such as the installer, maintenance person, owner or user.

With this instruction booklet Bettio Flyscreens Srl wishes to provide Customers with a tool for better, correct use of the flyscreens so as to optimize their performance.

For correct and best use of the system it is therefore recommended that these notes be kept to hand for quick reference whenever required. Supplementary information may be had in the Operating and Maintenance Guide and the Technical File available at the Company's offices.

2. SCOPE

These instructions refer specifically to the PICOSCENICA® model.

3. REFERENCES

These instructions have been prepared, as have other instructions for use affixed to the machine, in accordance with point 1.7.4 of Directive 2006/42/EC taking into consideration normal conditions of use of the machine, to inform operators/users also of the residual risks that the product presents.

4. ENVISAGED USE

The function of the installed flyscreen system is solely to provide protection against the intrusion of insects and small animals into the environments to be protected.

Any use other than has been described above is considered incorrect and is therefore forbidden, since the relative working conditions will not have been taken into account when the manufacturer analysed the risks and consequently there could be no specific protective devices fitted. Do not lean against the mesh.

The flyscreen must be closed when wind speed reaches 20 km/h.

Misuse relieves the manufacturer from all liability for any injury to persons or damage to property.

Failure to comply with the conditions of use automatically invalidates any type of warranty given by the manufacturer.

5. OPERATOR REQUIREMENTS

Normal use of the flyscreen is allowed for non-professional operators provided they are aged 12 and over.

Installation, repair and extraordinary maintenance must be carried out by qualified technical personnel.

6. RECOMMENDATIONS FOR INSTALLATION

Installation must be carried out in full compliance with Italian Legislative Decree 81/2008 and subsequent amendments and additions for all that concerns the safety of persons.

In accordance with current laws, the client and the installer are responsible for safety.

Before using any work platforms, scaffolding, steps and any personal protection equipment (slings/harness, safety belts, gloves, safety shoes, helmets, etc.), check that they are in compliance with regulations and in good condition. Use suitable slinging equipment.

If there is more than one installer, the work must be coordinated and the tasks and responsibilities defined.

Operators must abide by the safety instructions received (POS).

If the product is to be installed on any floor above ground level, the area must be cordoned off and supervised while the product is being raised to the relevant floor so that no person is under any suspended load.

The product packaging contains the instructions for installation, use and maintenance as well as a warranty: the installer must make sure that they are read, explained and handed over to the end user.

7. INSTALLATION OF THE MECHANICAL STRUCTURE

Incorrect installation can cause injury to persons. Carefully read the instructions for correct fixing of the product so that there is no risk of it falling down.

The state of the structure onto which the flyscreen will be fixed/anchored must be checked. The dynamic stress that the frame must withstand with the flyscreen fully unrolled from the cassette is equivalent to a wind speed of 130 km/h.

With hollow bricks use suitably sized expansion plugs with chemical adhesive.

If the resistance requirements necessary for safe fixing are not satisfied, increase the number of wall plugs and screws.

The fixings or anchors and screws depend on the type and state of the masonry/metal/frame structure on which the product is being installed/fixed.

Wall plugs and screws are not supplied with the product.

Take care when handling the product: the winder mechanisms are mounted with loaded springs.

The instructions for installation are described on the sheet contained in the kit packaging.

Any sealing must be done with neutral silicone resin.

8. MAINTENANCE

8.1 Routine maintenance

Given the high quality of the materials used in making the flyscreen, no routine maintenance is envisaged other than cleaning the fabric or the mesh to protect it against the formation of mould/mildew caused by dust or other material being deposited on it. In addition, periodic cleaning prevents the buildup of dust or other materials that may compromise the proper functioning of the product.

The mesh must be visually inspected at least twice a year; in spring before being used for the summer and in autumn before packing it up for the winter. The mesh may be cleaned with a vacuum cleaner or with a sponge or cloth dampened with lukewarm water. Let the mesh dry thoroughly after cleaning before winding it up.

Do NOT use solvents, ammonia or hydrocarbons for cleaning.

CAUTION: cleaning carried out using steps, platforms or such must only be done by specialized personnel working in conformity with safety regulations and who must use suitable personal protective equipment such as body harnesses with separate safety line (see Italian Legislative Decree 81/2008).

8.2 Extraordinary maintenance

CAUTION: all extraordinary maintenance must be done by professionally qualified and trained personnel: it is therefore necessary to request the service of a specialist.

If the flyscreen or any part of it needs to be dismantled, see the enclosed installation instructions.

If the mesh is torn, however small the tear, the mesh must be replaced.

Only use original spare parts otherwise the warranty is invalidated.

9. WARRANTY

The warranty is applicable in relation to the contents of Italian Legislative Decree No. 24 of 02.02.2002. The Warranty is for 24 months (or more when explicitly indicated) and covers natural persons who purchase the product for purposes that may be considered unrelated to their professional activity (private end customer).

The warranty is for 12 months if the product is invoiced to a Company or Professional office subject to VAT.

The warranty covers any part or parts which are shown to be defective due to faulty material or workmanship. The company will not be responsible for any incidental or consequential damage or injury. The warranty does not cover any costs incurred to reach the place where the product under warranty is installed nor any costs for installation or removal.

As is accepted practice, the original invoice or receipt is evidence of the date of purchase and therefore of the validity and duration of the warranty.

9.1 Rules for the Warranty to be valid

- Comply with the allowed use of the product.
- Comply with the instructions for use and maintenance.
- The warranty will only be valid if accompanied by the invoice or receipt giving evidence of the date of purchase.
- Only a specialized installer may carry out installation as well as compulsory maintenance, both of which shall be confirmed by the invoice or receipt related to this warranty.

9.2 Invalidation of the Warranty

- Misuse of the product in the presence of wind, rain, hail, snow or other combined events.
- Collapse of the part where the product has been anchored.
- Tampering with the product; installation, dismantling and maintenance not carried out by a specialized installer or not carried out in accordance with regulations or these instructions.

- Failure to have compulsory maintenance carried out within the established times.

- Use of other than Bettio Flyscreens Srl original spare parts.

- Removal or concealment of the Bettio Flyscreens Srl identification label making traceability of the product impossible.

For other specific exclusions from the Warranty, see any notes specified by the Company.

For all and any dispute the sole place of jurisdiction is Venice.

10. PACKAGING, HANDLING AND TRANSPORTATION

Given the size and shape of the product, when it is longer than 240 cm it must be handled by two persons.

Keep the packaging materials out of reach of children, since they can be a source of danger.

11. LIST OF RISKS

11.1 Installation: take all the necessary precautions on site especially in respect of the risks of fall.

11.2 Risks related to use and routine maintenance.

Products with return spring:

a) danger of fall during cleaning of frame or mesh: avoid leaning out of windows or only do so using suitable equipment

11.3 Risks related to maintenance/repair:

a) danger of impact during spring loading/release operations;

b) danger of incorrect refitting of the flyscreen after mesh replacement;

c) danger due to failure to use equipment and PPE that do not bear the EC mark;

11.4 Danger of tripping over mobile guide of the PICOSCENICA® products: place warning signs.

11.5 Risks related to disposal: the product must be disposed of in accordance with rules and regulations currently in force.

11.6 The noise level is below 70 dB(A).
